

Control and quality as the basis

A filter regulator is the starting point for every pneumatic system. It fulfils the control and quality function in one housing. Knowing the capacity, functionality, housing material and size is important in order to select the right size. This overview presents the general options for a compressed air preparation unit.

Metal

* Available in polymer and metal

MS6*

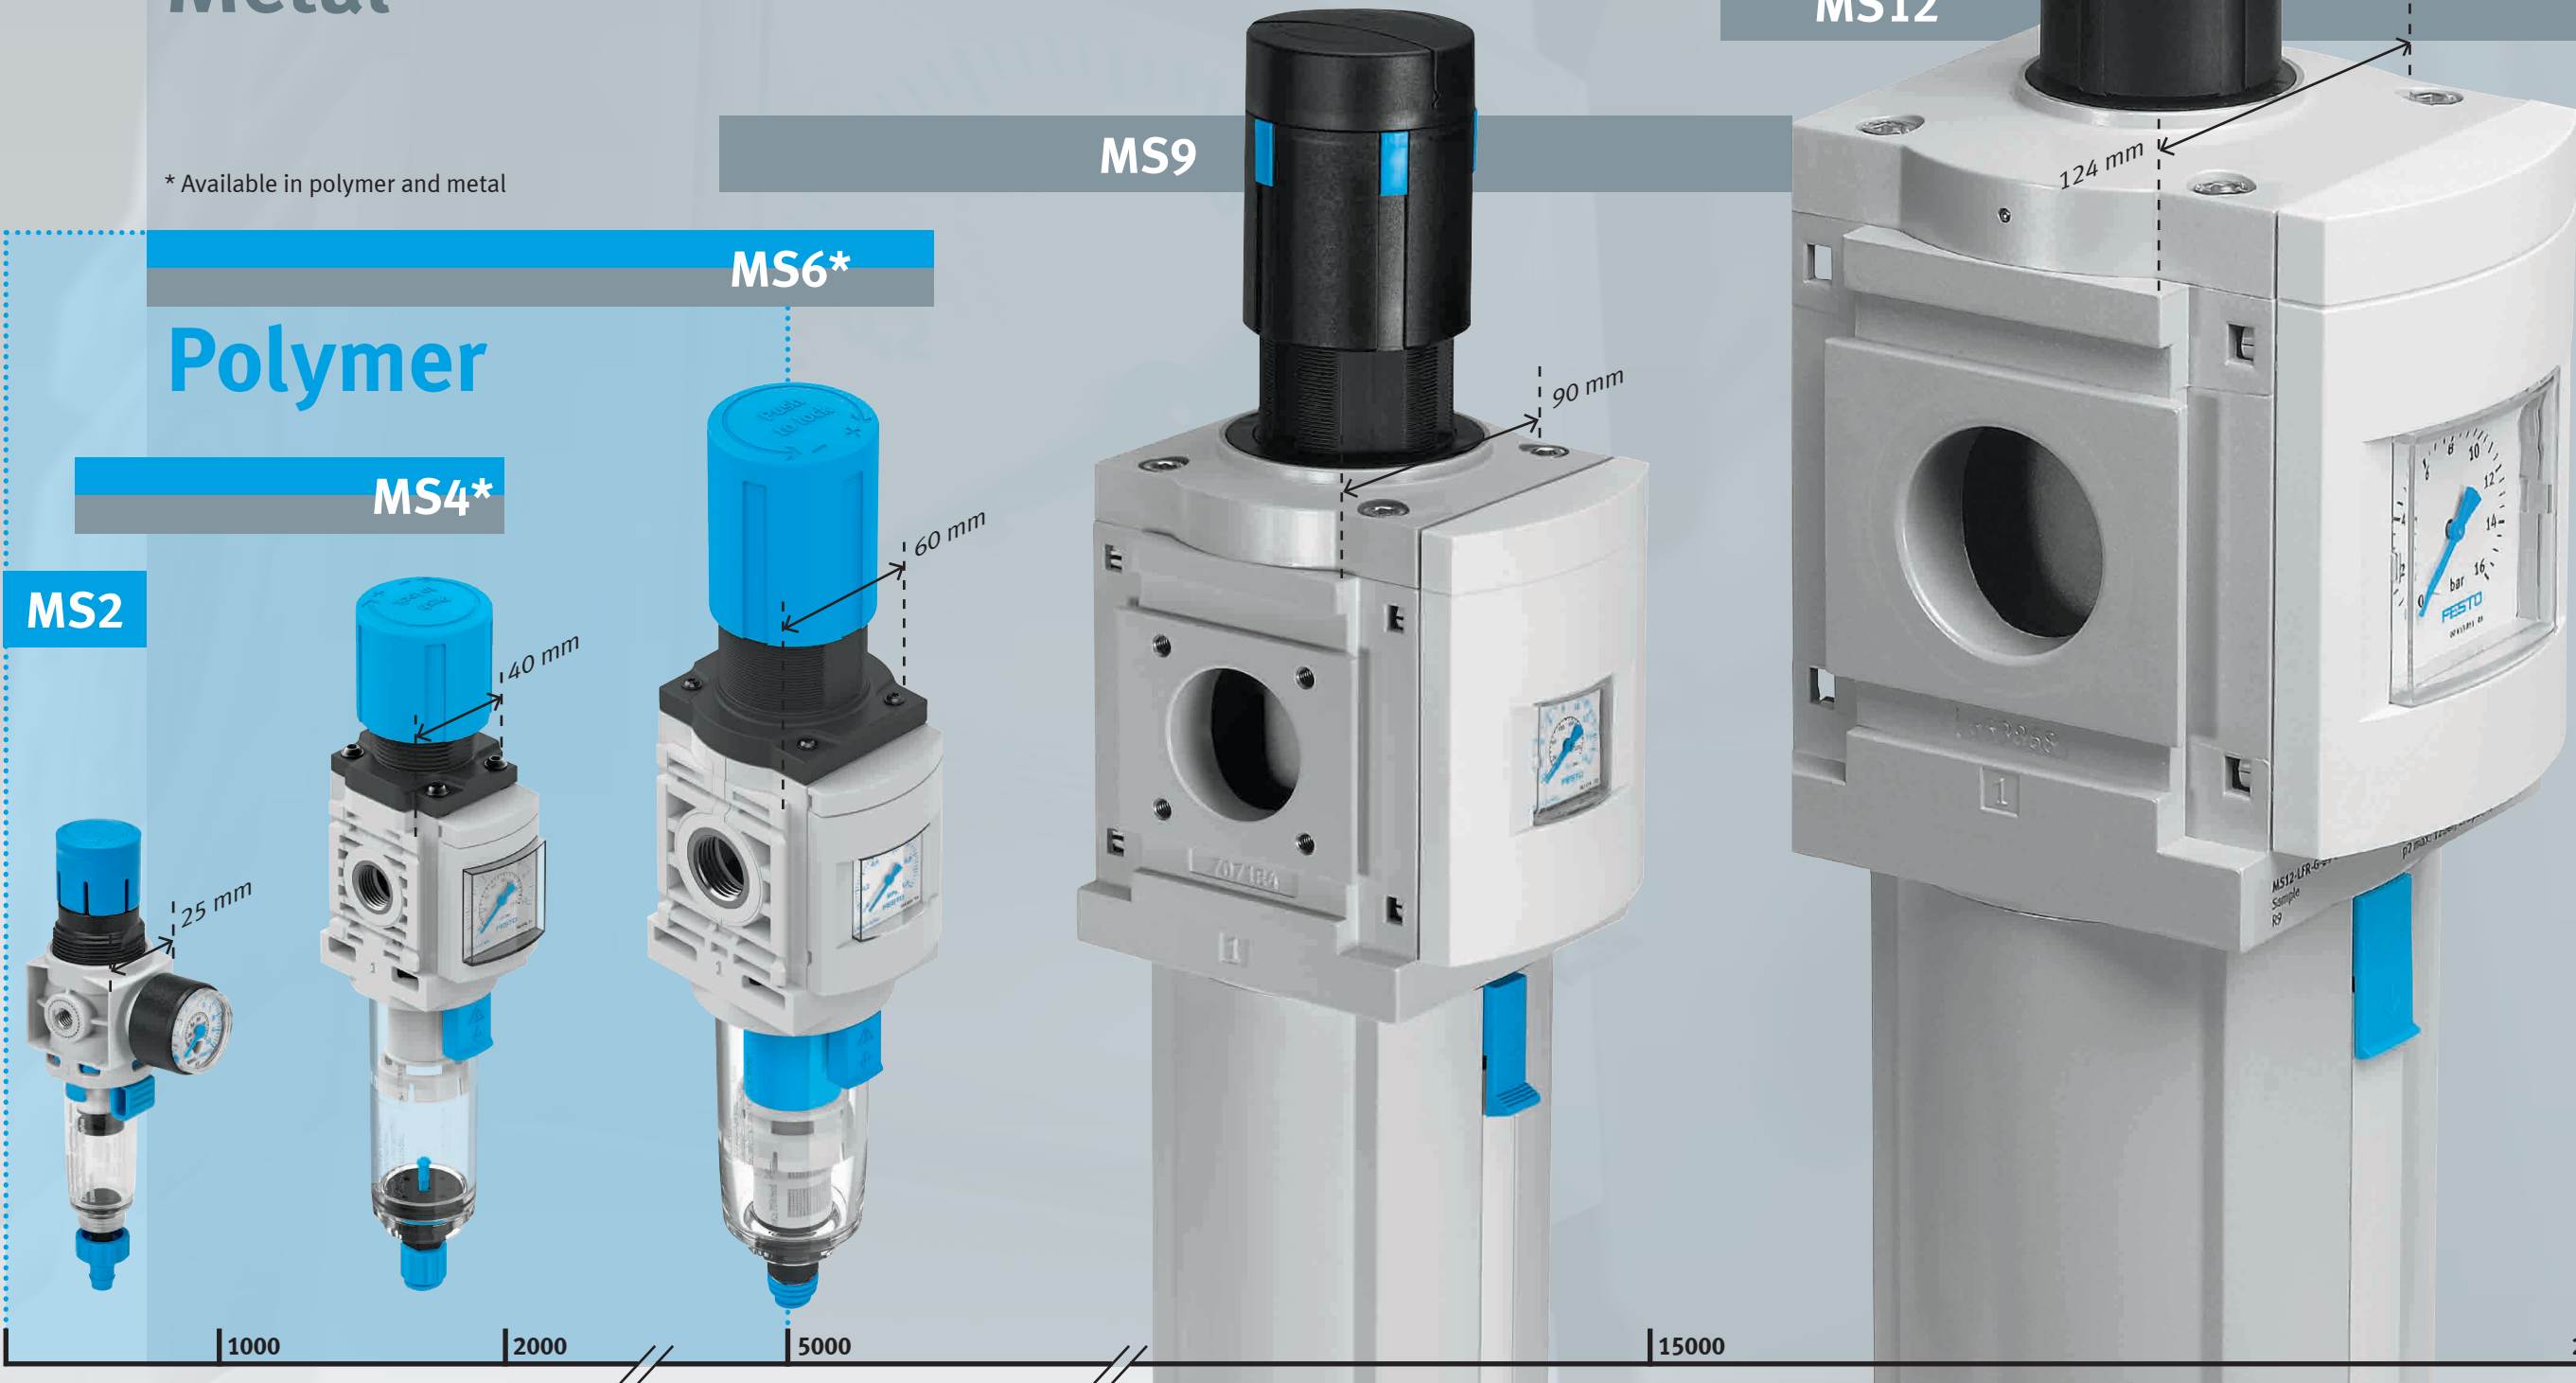

Polymer

MS4*

MS2

MS9

MS12

MS Polymer

- Basic functionality
- Essential functions

MS Metal

- Wide range of options to choose from
- Integration of pressure and flow sensors
- Fine filtration and dryers
- Safety functions
